

# Mammals Project

Students are to collect information about their chosen (chosen in class from the Top 50 List from [arkive.org](http://arkive.org)) using the internet and any other book sources available. Secondly, students are to find the measurements (length and height in inches) of the mammal and cut the two measurements from a string (thick enough to see), cord, or yarn. Please make sure the two pieces are the same color and are “tagged” with animal’s name, and whether it is the length or height! Students are to watch some video and pictures of their mammal. Website to use are: [arkive.org](http://arkive.org) (\*\*Key website: Go under this website, Explore ARKive, Mammals), and [animal.discovery.com](http://animal.discovery.com).

Due Date: Monday, Dec. 12

Points: 100---- 50 facts sheet, 50 measurements

Mammal: \_\_\_\_\_
